# Proposal 1: Isipho Donations (Non-Profit Organisation)

## 1. Organisation Overview

Name: Isipho Donations

**Background & History:** Isipho Donations is a South African non-profit organisation established to bridge the gap between generous donors and disadvantaged individuals and families. The organisation collects essential resources such as food, clothing, school supplies and blankets and distributes them to vulnerable communities. According to the South African Government (2025), non-profit organisations play an important role in providing services that benefit communities and address social needs.

**Mission & Vision:** The mission of Isipho Donations is to improve lives by connecting donors with communities in need through transparent, reliable and compassionate charitable services. Its vision is to build stronger local communities and contribute towards reducing poverty through community-driven giving.

**Target Audience:** The target audience includes donors, local businesses, schools, churches, volunteers and community members requiring assistance.

## 2. Website Goals and Objectives

**Goals:** The main goals of the website are to increase public awareness, encourage online donations, recruit more volunteers and build the organisation's credibility. Laudon and Laudon (2023) state that organisations can use information systems and digital platforms to improve communication and interaction with stakeholders.

**KPIs:** The website's performance will be measured by monitoring the monthly number of volunteer sign-ups, donation enquiries and website visitors. These indicators will help determine whether the website is achieving its intended objectives.

### 3. Current Website Analysis

**Strengths & Weaknesses:** Currently, the organisation relies primarily on word-of-mouth and informal community outreach. While this allows the organisation to maintain direct communication with the community, it lacks a centralised digital platform, making it difficult for remote donors to understand how and where to donate.

**Areas for Improvement:** Developing a professional and accessible website will make information easier to find and help donors understand the available donation options. Nielsen (2020) states that websites should be easy to navigate and usable so that visitors can find the information they need efficiently.

### 4. Proposed Website Features and Functionality

The proposed website will include a Home Page, About Us, Our Programmes, Donation Guide and Contact Us page. The website will also include clear call-to-action buttons for donations and an interactive contact form.

According to the World Wide Web Consortium (W3C) (2023), websites should provide accessible and user-friendly content. Therefore, the proposed design will focus on clear navigation, readable content and easy access to important donation information.

### 5. Design and User Experience

**Colour Scheme:** Warm and inviting earth tones such as soft green, white and orange will be used to create a feeling of trust, community and care.

**Typography:** Clean sans-serif fonts such as Arial or Aptos will be used to make the website easy to read across different devices.

**Layout:** A clean, single-column and card-based layout will be used to create a clear visual hierarchy. The website layout will first be planned using low-fidelity wireframes created in Draw.io.

Nielsen (2020) states that simple navigation, readable text and a consistent layout can improve website usability. These principles will therefore be considered when designing the website.

## 5.1 Low-Fidelity Wireframes

FIGURE 15: HOW DONATION REQUESTS WORKS - LOW-FIDELITY WIREFRAMES

## 6. Technical Requirements

Languages: HTML5, CSS3 and basic JavaScript.

Hosting & Domain: A suitable local .org.za domain name hosted through a reliable shared web hosting provider.

According to MDN Web Docs (2025), HTML provides the structure of a webpage, CSS controls its presentation and JavaScript can be used to add interactive features. These technologies will therefore be used to develop the proposed website.

## 7. Timeline and Milestones

Week 1–2: Research, planning, and wireframe creation.

Week 3–4: HTML structure development and CSS styling.

Week 5: Testing, debugging, and final submission.

## 8. Budget

| Item                | Estimated Cost         |
|---------------------|------------------------|
| Domain registration | R150–R300 per year     |
| Web hosting         | R1,000–R1,500 per year |
| Website development | R5,000–R7,000          |
| Basic maintenance   | R300–R500 per month    |

Estimated initial development and setup cost: Approximately R6,150–R8,800, excluding ongoing monthly maintenance.

# Proposal 2: Paw Haven Pet Care (Small Business)

## 1. Organisation Overview

**Background & History:** Paw Haven Pet Care is a South African pet care enterprise established to provide reliable, professional and compassionate services for companion animals, including dogs, cats, birds and small animals. The business aims to give working professionals and families peace of mind when they are away from their pets. According to the American Pet Products Association (2024), pets are an important part of many households, which highlights the importance of responsible and reliable pet care services.

**Mission & Vision:** The mission of Paw Haven Pet Care is to provide safe, reliable and compassionate pet care that promotes animal wellbeing. Its vision is to become one of South Africa's trusted pet care service providers through consistent and professional service.

**Target Audience:** The target audience includes pet owners, working professionals, busy families, senior citizens and general animal lovers.

## 2. Website Goals and Objectives

**Goals:** The main goals of the website are to increase online appointment bookings, clearly promote professional pet care services, build customer trust through testimonials and educate pet owners about proper animal care. Laudon and Laudon (2023) explain that digital systems can help organisations improve communication and interaction with customers.

**KPIs:** Website performance will be measured by tracking the monthly number of online bookings, contact form enquiries and unique website visitors.

### 3.Current Website Analysis

**Strengths & Weaknesses:** The business currently operates mainly through telephone calls and social media channels. While these methods allow direct communication with customers, they can create communication delays during busy periods and do not provide customers with a structured overview of available services and booking times.

**Areas for Improvement:** A dedicated website will provide customers with one central place to view services, make enquiries and submit booking requests. Kotler and Keller (2022) explain that a strong digital presence can help organisations communicate their value to customers and strengthen their brand presence.

### 4.Proposed Website Features and Functionality

The proposed website will include a Home Page, About Us, Our Services, Online Booking Form, Gallery, Customer Testimonials, FAQ and Contact Us page.

The website will provide interactive service listings, a digital booking form and responsive navigation that can be used on mobile phones, tablets and desktop computers.

According to the World Wide Web Consortium (W3C) (2023), websites should provide accessible and user-friendly experiences. The proposed website will therefore focus on clear navigation, readable content and simple booking functionality.

## 5.Design and User Experience

**Colour Scheme:** A friendly and welcoming colour palette using blue, green and orange will be used to represent trust, nature and positive energy.

**Typography:** Modern and readable sans-serif fonts will be used with clear headings and text sizes to make the website easy to read.

**Layout:** A clean and responsive grid layout will be used to create a smooth visual flow across smartphones, tablets and desktop computers. The initial layout will be planned using low-fidelity wireframes created in Draw.io.

Nielsen (2020) argues that simple navigation, consistent layouts and readable content contribute to good website usability. These principles will be applied throughout the proposed website.

## 6. Technical Requirements

Languages & Frameworks: HTML5, CSS3 and JavaScript.

Hosting & Domain: A suitable local .co.za domain name hosted through a reliable shared web hosting provider.

According to MDN Web Docs (2025), HTML provides webpage structure, CSS is used to control presentation and JavaScript adds interactive functionality. These technologies will therefore be used to develop the Paw Haven Pet Care website.

## 7. Timeline and Milestones

Week 1: Research, content sourcing, and initial project planning.

Week 2: Designing low-fidelity wireframes in Draw.io.

Week 3: Developing the foundational HTML structure for all pages.

Week 4: Applying CSS styling and responsive layouts.

Week 5: Functional testing, debugging, and cross-browser checks.

Week 6: Final review, polishing, and project submission.

## 8. Budget

| Item                | Estimated Cost  |
|---------------------|-----------------|
| Domain Registration | R180 per year   |
| Web Hosting         | R1,200 per year |
| Website Development | R8,500 once-off |
| Website Maintenance | R500 per month  |
